HOME ENERGY AUDIT

Cooling • Heating • Refrigeration
Wine Cellars • Home Performance

What are you experiencing in your home?

Creating a comfortable energy efficient home

The solution to creating a comfortable energy efficient home requires an examination of the whole home as a system.

Hobaica Services are experts in Home Energy Audits. Our Energy Advisors understand how all the parts of your home work together and the potential problems that may arise when your home is out of balance. Using state of the art equipment and technology, we are able to identify major culprits of energy waste in your home. Some of the areas we look at include:

- ✓ **Proper amount of fresh air in your home and where that fresh air is coming from**
- ✓ **Too much fresh air creates an inefficient home and increases air quality issues.** Too little fresh air creates an unhealthy environment
- ✓ **Age and condition of your A/C System**
The more efficient your air conditioning system is, the more you will save on your utility bills and the more comfortable you will be.
- ✓ **Duct system leakage**
All duct systems leak. Minimizing this leakage will reduce your utility bills and improve the air quality in your home.
- ✓ **Proper insulation in your home**
Having proper insulation in the home will aid in reducing utility bills and minimize temperature swings.
- ✓ **Pressure differences in your home**
Pressure imbalance in a home creates an inefficient and unhealthy condition. Correcting this will reduce your utility bills and increase the air quality.

- ✓ **High energy bills**
- ✓ **Uncomfortable rooms**
- ✓ **Stuffy air**
- ✓ **Lingering odors**
- ✓ **Excessive dust**
- ✓ **Drafty rooms**
- ✓ **Foggy windows**
- ✓ **Mildew or mold**
- ✓ **Allergy symptoms**
- ✓ **Frequent illnesses**

The average home is more polluted than the air we breathe outside. Your comfort & health is dependent on several key factors.

- ✓ **Heating and cooling system**
- ✓ **Air distribution system**
- ✓ **Insulation**
- ✓ **Fresh air**
- ✓ **Construction of the home**

In order to have a comfortable and healthy home, it is important that all of these factors work together.
